

## HOWTO Use Shared Folders

This will show how to set up a shared folder on the host system (e.g., Windows, Linux, Mac OS), and use this folder to exchange files between the ETACE Virtual Appliance and the host system.

### Settings

1. In the VirtualBox Settings: Select a Shared Folder (German: "Gemeinsame Ordner"):

```
P:\docs (or another name)
```

2. In ETACE Virtual Appliance:

- Create a mount point in the user's /home folder:

```
# cd /home/eurace  
# mkdir shared_folder (or another folder name)
```

- Mount the Shared Folder from the host system on the mount point.

In ETACE Virtual Appliance, open a Terminal and type:

```
# su  
Enter password: root
```

- Now mount the Shared Folder:

```
# mount -t vboxsf shared /home/eurace/shared_folder
```

3. Test if the Shared Folder is correctly mounted by creating a file on the host system, and then check if this file is visible in the ETACE Virtual Appliance.

- Create a file in the Shared Folder on the host system (Windows, Linux, Mac):

```
P:\docs\test.txt
```

- In the ETACE Virtual Appliance, check if it exists:

```
# ls -l /home/eurace/shared_folder  
# less /home/eurace/shared_folder/test.txt
```
